

RibGrips

Durability and Comfort for the Palm of a User's Hands

Propelling oneself into motion to get around is not easy. Wheelchair users develop extra strength in their hands, but protecting them can be a challenge. RibGrips are a unique handrim option that attach to most standard wheels offering 360-degrees of ergonomic grip, relieving palms of cramps and calluses and offering an expanded level of mobility.

Durable Material

RibGrips are made from a unique proprietary thermal plastic material (and latex free) that is resistant to tearing due to strikes from sharp objects, peeling or separation. This means less grip pressure is needed when slowing and breaking, providing relief to the user's hand surface.

Easy Installation

RibGrips attach to most standard 24-inch wheels and can be installed in approximately 15 minutes. Special Riv-to-Tab conversion hardware will allow for installation on 25-inch wheels and is provided with the shipment.

Stylish

RibGrips are available in:

- Racer Red**
- Galactic Black**
- Hot Pink**
- Hero Blue**
