

Jaco Robotic Arm

Greater Independence

The Jaco Robotic Arm is providing users who have upper body mobility impairments with the opportunity to experience more independence and freedom with less dependency on caregivers. The Robotic Arm makes it possible to carry out everyday tasks at home or at work, and resembles a full human arm. It has a smooth 6-movement axis, which corresponds to the shoulder, elbow and wrist. There are 16 movements in all.

Versatile and Reliable

The Robotic Arm is controlled by the user's wheelchair onboard system (joystick, head control, etc.). It's easy to install and can be mounted on almost any power wheelchair. The Robotic Arm is also lightweight and strong thanks to its carbon fiber make.

Technical Data

Weight	12 lbs.
